

RENDANI MASEGWALA

Full-Stack Laravel Developer

Johannesburg, South Africa | 082 482 3473 | rendanni.m@gmail.com | <https://rendani.netlify.app>

PROFESSIONAL SUMMARY

Full-stack developer with experience building Laravel-based applications, decoupled APIs, React frontends, and internal admin systems. Strong in secure authentication, multi-tenant architecture, database design, workflow automation, and scalable product foundations. Looking for remote developer roles focused on backend engineering, product development, and business platform delivery.

CORE SKILLS

Languages & Frameworks: PHP, Laravel, JavaScript, React, Inertia.js, WordPress

Backend & Architecture: REST APIs, PostgreSQL, MySQL, Sanctum auth, RBAC, API versioning, multi-tenant foundations, UUID models

Frontend & Tools: React, Bootstrap, Tailwind, responsive dashboards, Git, Docker, Postman, Linux CLI, GitHub Actions

Ways of Working: Remote collaboration, Agile delivery, debugging, feature ownership, maintainable code, product thinking

SELECTED PROJECTS

Resource Modular Management (RMM) - *Laravel 12 API + React + PostgreSQL*

- Built a modular business management platform with a decoupled Laravel API and separate React frontend.
- Implemented tenant isolation, custom tenant access middleware, UUID-based models, Sanctum authentication, and API versioning.
- Structured scalable foundations for inventory, user roles, permissions, and future integrations such as Xero.

Career Day Event Platform - *Laravel + Inertia.js + Tailwind*

- Engineered a platform for schools to manage career-day events, student participation, industry assignments, and admin workflows.
- Built secure CRUD operations, role-based flows, and a responsive dashboard experience for event management.

Enterprise Learning / Admin Platform - *Laravel patterns + React admin workflows*

- Designed backend structures and admin workflows for documents, quizzes, videos, user management, course content, and progress tracking.
- Worked on protected routes, reusable admin interfaces, CRUD flows, and scalable content relationships.

Market Segmentation MVP / AdHive - *Laravel + React + PostgreSQL architecture*

- Planned an API-first product foundation for audience segmentation, monetisation, predictive intelligence, and cross-sell workflows.
- Defined secure architecture patterns including authentication, tenant-aware access, schema planning, and phased MVP delivery.

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer | [Remote](#) / [Contract](#) | 2025 - Present

- Build decoupled Laravel + React solutions for internal tools, client platforms, and SaaS-style products.
- Focus on secure authentication, database design, API integration, dashboards, multi-tenant access control, and maintainable backend structure.
- Work across product planning, implementation, debugging, deployment preparation, and remote collaboration.

PHP Developer | [Baseline Digital](#) | 2022 - 2024

- Delivered web application features, admin tools, API integrations, and data-driven workflows across client platforms.
- Worked with PHP, Laravel-style backend patterns, JavaScript, Bootstrap, MySQL, and structured web development practices.

- Supported feature development, maintenance, debugging, and client-request implementation in a collaborative agency environment.

Freelance Developer | **Independent** | 2020 - 2021

- Built and maintained client websites and custom PHP solutions with a focus on practical business requirements.
- Handled WordPress work, responsive front-end updates, and backend customisation for small business clients.

EDUCATION

- Bachelor of Computer and Information Sciences in Application Development - Varsity College, Johannesburg
- Diploma in Software Development - Varsity College, Johannesburg
- Certificate: Backend Development and APIs - freeCodeCamp
